 **ULTRAFINE**

Introducing
New range of ultramarine Violet / Pigment Violet 15

CHEMISTRY

ULTRAMARINE VIOLETS are made by chemical conversion process of selective particle size Ultramarine Blues. The overall chemical structure is not changed, but there are significant changes in the chromatic values. By Chemical modification, the red & blue coordinates in the colour system changes, which results in Ultramarine violet of either bluer or redder undertone. However, it retains its excellent chemical and functional performance of Ultramarine blue.

IDENTIFICATION

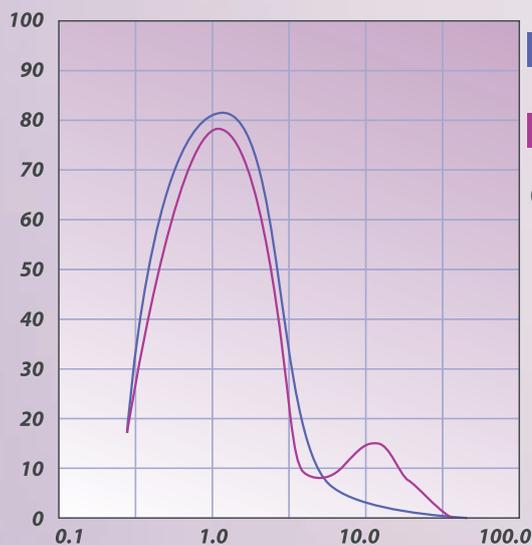

ULTRAMARINE VIOLETS are Sodium Aluminum Sulpho-silicates.
